SAFEGUARD®
WHY HOLD PRESSURE WHEN SAFEGUARD CAN?

CARDIOVASCULAR

WHY HOLD PRESSURE WHEN SAFEGUARD CAN?

Let SAFEGUARD assist you in obtaining and maintaining hemostasis. The SAFEGUARD Manual Assist Technique (SMAT) clinical trial demonstrates that SAFEGUARD 24cm is safe and effective in reducing active compression time in femoral artery cannulation following diagnostic and interventional procedures. SAFEGUARD simplifies pre and post-hemostasis management of the access site. It reduces demands on the staff, maximizes valuable resources, and enhances patient comfort.

SAFEGUARD 24cm reduces active compression time¹

	Diagnostic	Interventional
Active Compression Time (minutes)	5	10
Passive Compression Time (minutes)	120	240
Total Compression Time (minutes)	125	250

Low Complication Rate

Safeguard has a low mean complication rate vs. manual compression.

Total major complication rate (n = 101)	
SAFEGUARD Patients ¹	1.0%
Historical controlled rate of manual compression ²	2.4%

¹ Data on File: Multi-Center Trial of the Safeguard Manual Assist Technique.

² Manual compression subset from the Reduced Vascular complications After Percutaneous Coronary Interventions with a Nonmechanical Suture Device: Results from the Randomized RACE Study, Sanborn, TA.

Real pressure:

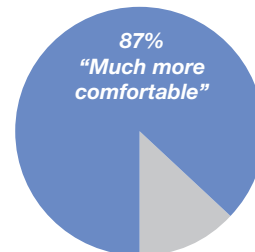

- SAFEGUARD delivers adjustable active compression and enables immediate pressure adjustment
- Maintains consistent pressure on the site during patient recovery as well as patient positioning and transport
- Provides site management control for non-compliant patients
- Facilitates site assessment through the clear window without removing the device
- Can be used as a sterile dressing to protect the site from contamination

Real comfort:

- SAFEGUARD is comfortable for the patient
- Maintains consistent pressure on the site when obtaining hemostasis with manual compression
- In the clinical study, 87% of patients who had undergone a catheterization procedure in the past indicated that SAFEGUARD with MAT was “much more comfortable” than any previous procedure
- SAFEGUARD adheres to the patient while inflated regardless of patient’s anatomy

SAFEGUARD Manual Assist Technique (MAT) Patient Comfort vs. Previous

13% "Somewhat more comfortable" or "Same"

(n = 62)

GETINGE GROUP is a leading global provider of products and systems that contribute to quality enhancement and cost efficiency within healthcare and life sciences. We operate under the three brands of ArjoHuntleigh, GETINGE and MAQUET. ArjoHuntleigh focuses on patient mobility and wound management solutions. GETINGE provides solutions for infection control within healthcare and contamination prevention within life sciences. MAQUET specializes in solutions, therapies and products for surgical interventions, interventional cardiology and intensive care.
